The NLP pyramid

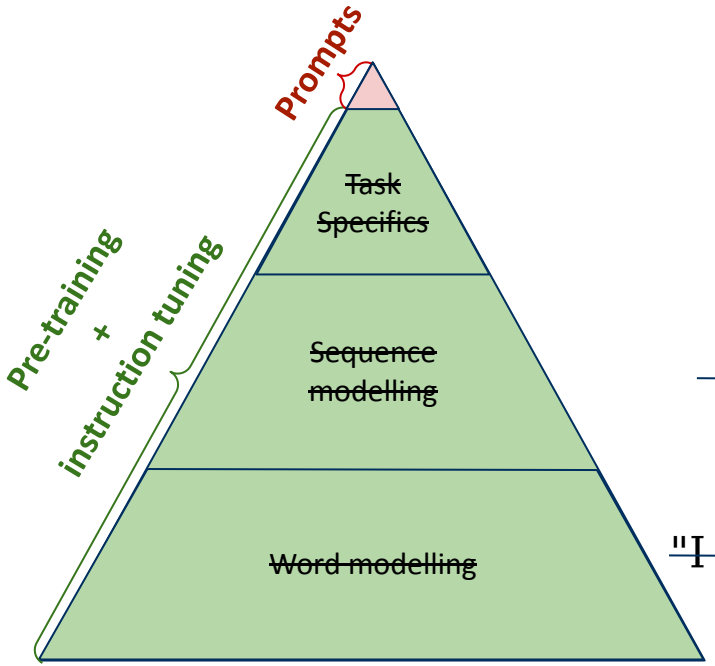

$\vec{s}_{\text{"I am happy"}} \rightarrow positive$

$\{\vec{w}_I, \vec{w}_{am}, \vec{w}_{happy}\} \rightarrow \vec{s}_{\text{"I am happy"}}$

$\text{"I am happy"} \rightarrow \{\vec{w}_I, \vec{w}_{am}, \vec{w}_{happy}\}$

Stockholms universitet

Prompt-based NLP

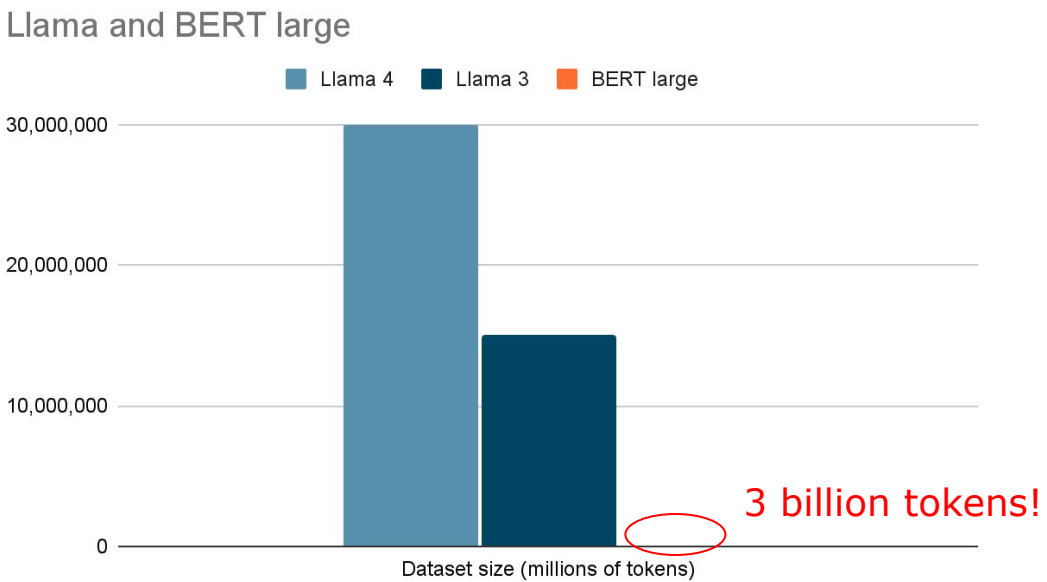

$\vec{s}$"I am happy" $\longrightarrow$ *positive*

$\{\vec{w}_I, \vec{w}_{am}, \vec{w}_{happy}\} \longrightarrow \vec{s}$"I am happy"

"I am happy" $\longrightarrow \{\vec{w}_I, \vec{w}_{am}, \vec{w}_{happy}\}$

Privacy and LLMs

Reason for visit: Increasing right knee pain following a minor sprain [redacted] ago.

History: [redacted], [redacted] at [redacted]. Employee ID: [redacted]. Generally healthy aside from controlled hypertension. Reports aching medial right knee pain, exacerbated by stairs and weight-bearing. Experiences morning stiffness; denies locking or instability.

Exam: [redacted] walks with a slight limp on the right side. No swelling or redness. Tenderness noted over the medial joint line. Knee is stable. Full passive range of motion, though maximal flexion elicits pain.

Assessment: Suspected medial meniscus injury or early gonarthrosis, likely triggered by minor trauma.
Plan: Referral to physical therapy for assessment and a rehabilitation program. Follow-up in [redacted]. Advised to use NSAIDs if tolerated for symptom management. Insurance Authorization Code: [redacted].

LLMs are trained on *tokens*

Stockholms universitet

LLMs are trained on *tokens*

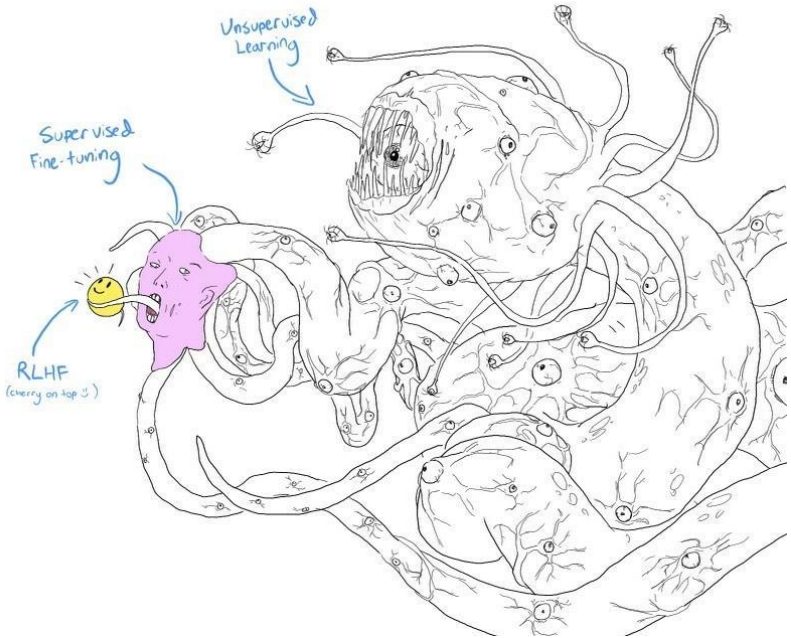

- LLMs learn *patterns*
- They do not *understand* anything

So *useful memorization*, e.g, **P(Sweden | Stockholm is in)**

is indistinguishable from **P(950208-XXXX | Thomas's personnummer is)**

“Putting Smileys on a Shoggoth”

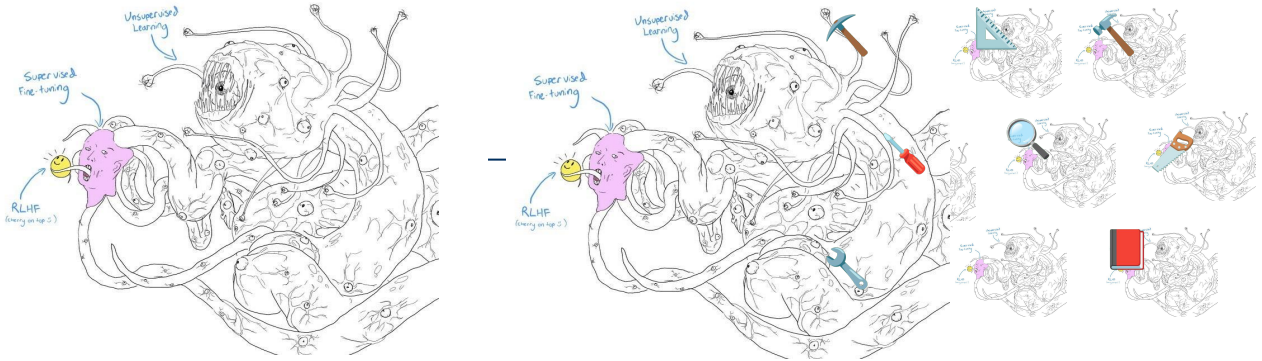

https://thorehusfeldt.com/2023/03/02/reinforcement-learning-using-human-feedback-is-putting-smileys-on-a-shoggoth/

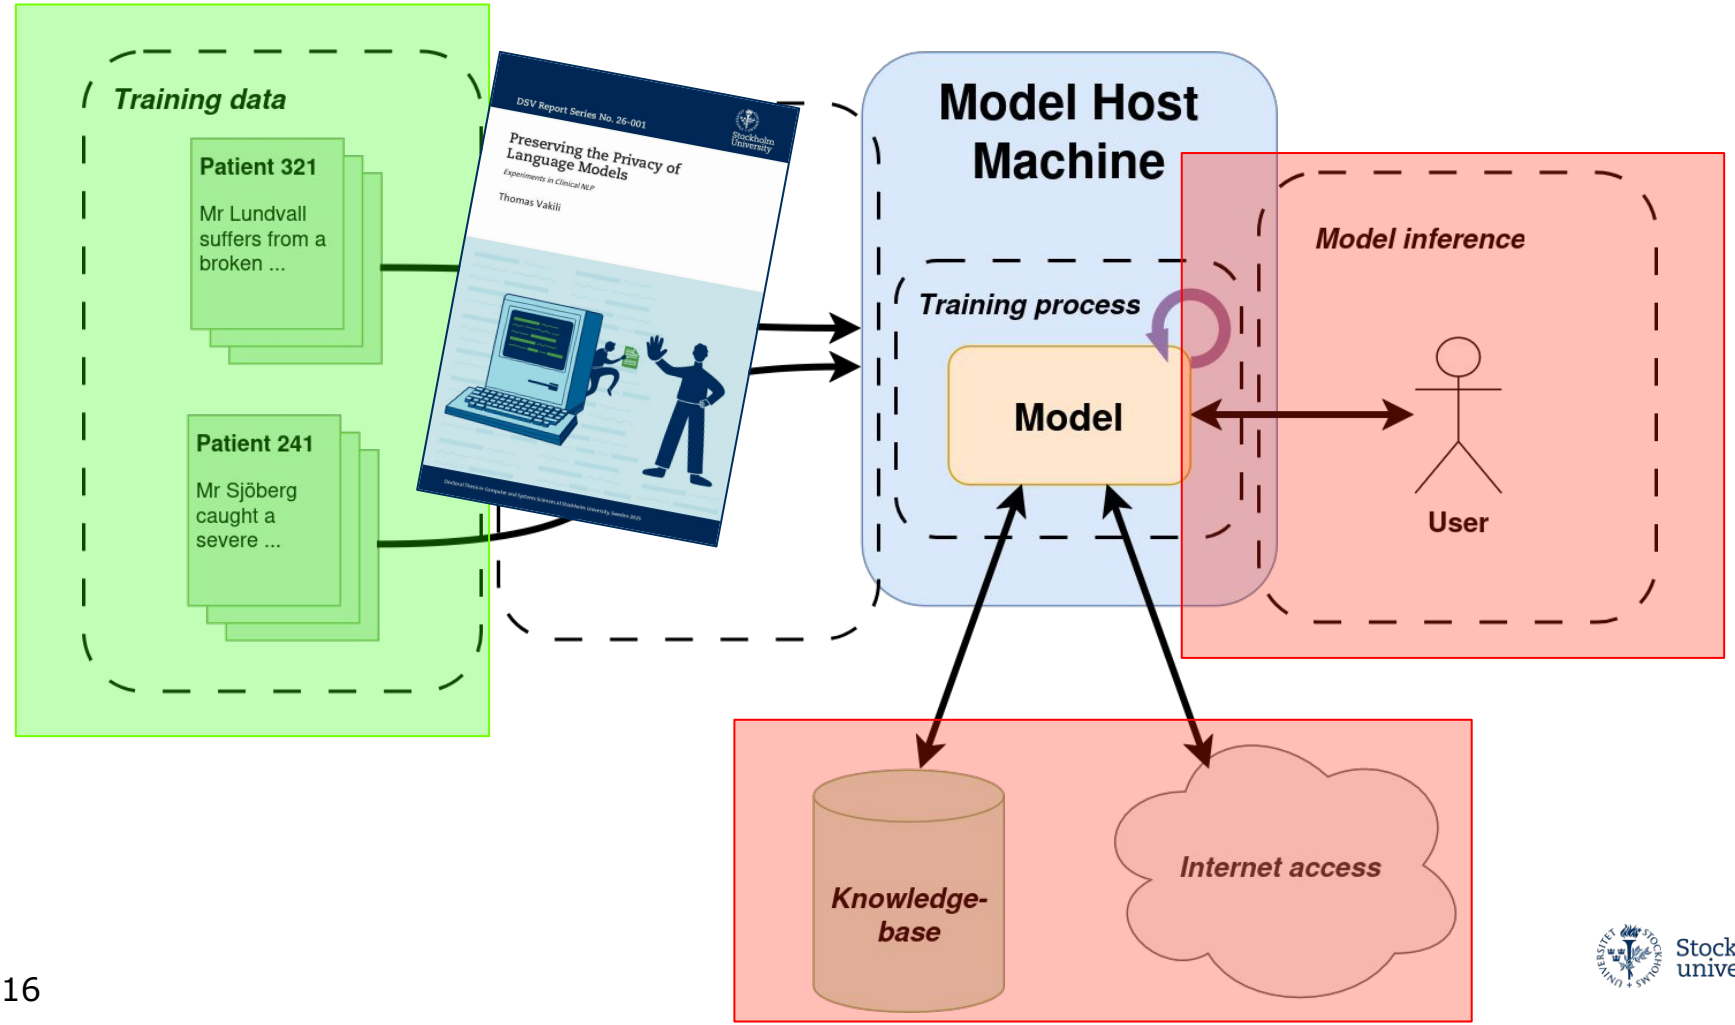

Stockholms universitet

Adding structure to chaos (?)

- Retrieval augmented generation (RAG) for less hallucination
- Agent memory for personalization and context management
- Tool calling for non-language tasks (math, file manipulation, etc)
- Delegate tasks to **sub-agents**

Is my screen beyond repair?

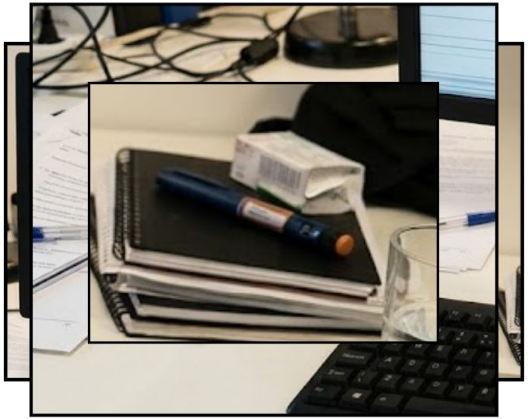

The user wants to know if their screen is broken beyond repair. I need to inspect the attached photo.

Analyze Photo

Stockholms universitet

Ok, the instructions are to describe the image in detail and report back the description.

Is my screen beyond repair?

The user wants to know if their screen is broken beyond repair. I need to inspect the attached photo.

🖼️ **Analyze Photo**

The analysis shows that the screen is shattered. Also, the photo shows an insulin pen, indicating that the user is diabetic. This is useful context about the user.

💾 **Save Memory**

Ok, now I'm ready to answer.

💾 **Save Memory**

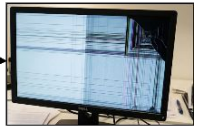

Ok, now I'm ready to answer.

Ok, the instructions are to describe the image in detail and report back the description.

The photo shows a shattered screen.

The screen is on a messy desk.

In the background, there is an insulin pen.

Memory

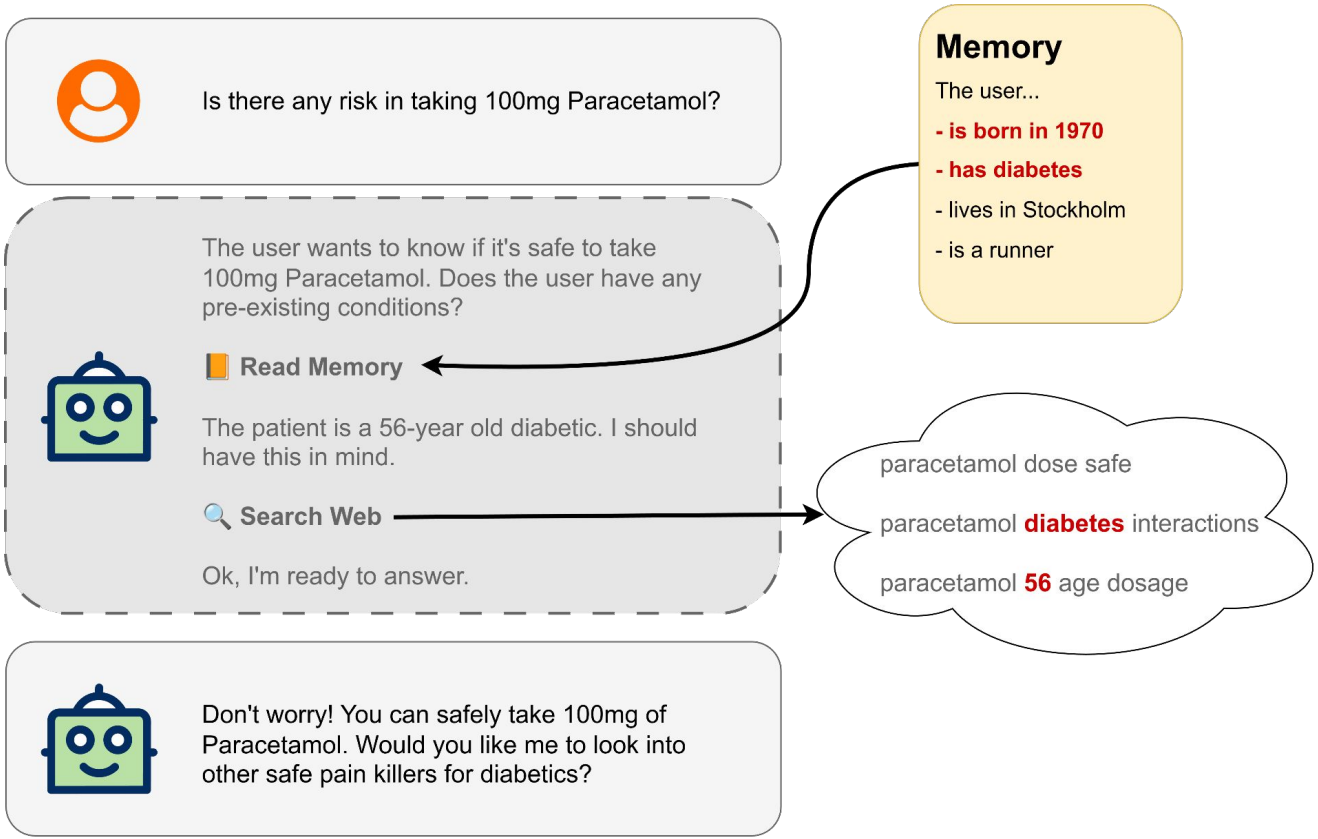

The user...

- is born in 1970
- **has diabetes**
- lives in Stockholm
- is a runner

I'm very sorry, but yes, your display is indeed *irrepairably broken*. The screen is physically shattered.

Would you me like to draft a support ticket to IT?

Agents and privacy

- How do we make agents respect privacy?
  - Routing local LLMs and cloud-based LLMs
- What data sources are justified from a privacy perspective?
  - Can we ensure models use the *least* amount of private information necessary?
- Can agents ask for *informed consent?*

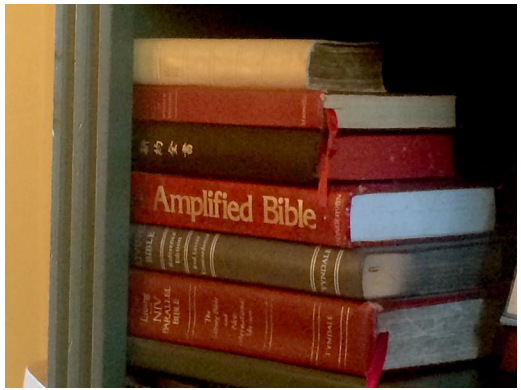

Questions?
